Dude — App Design Revision A

Changes to Navigation

The previous iteration lacked several things:

Users were unable to choose favorite friends to appear on Apple Watch.

Users could not see details about updates or friends.

Users could not add details to updates or send them to specific friends.
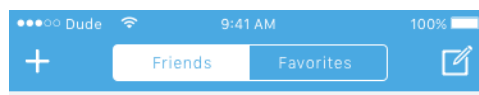

Users could not edit information about themselves.

This iteration will address these issues by restructuring navigation in several areas.

First, the app now includes a tab bar which divides the app by two major classes of information: information about 'myself' (the user) and information about others (the user's friends).

Person@2x.png

The updates tab contains what was previously the 'home view.' This is where the user sees updates from friends, manages friend requests and favorite friends, and creates updates. This tab is divided further between the user's friends and their favorites. They switch between the two via a `UISegmentedControl` in the navigation bar.
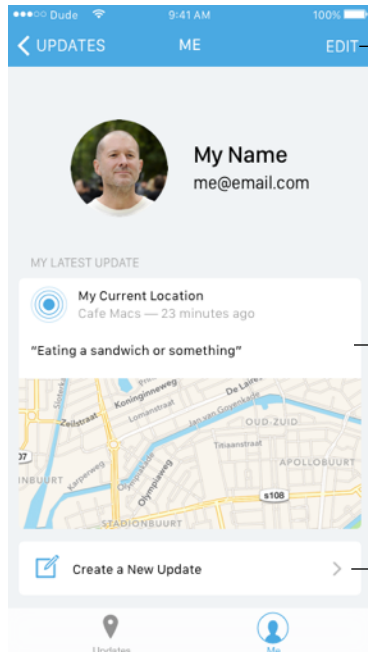

The Updates Tab

The two sections of the Updates tab

Included Asset
Favorites_Empty@2x.png

Note: When the user has favorites assigned, the Favorites section looks similar to the Friends section. Updates from the last 10 or so minutes appear in a Recent Updates section, and all of the user's favorites appear in an All Favorites section.

The Me Tab

The purpose of this tab is to show information about the current user, similar to a 'my profile.'

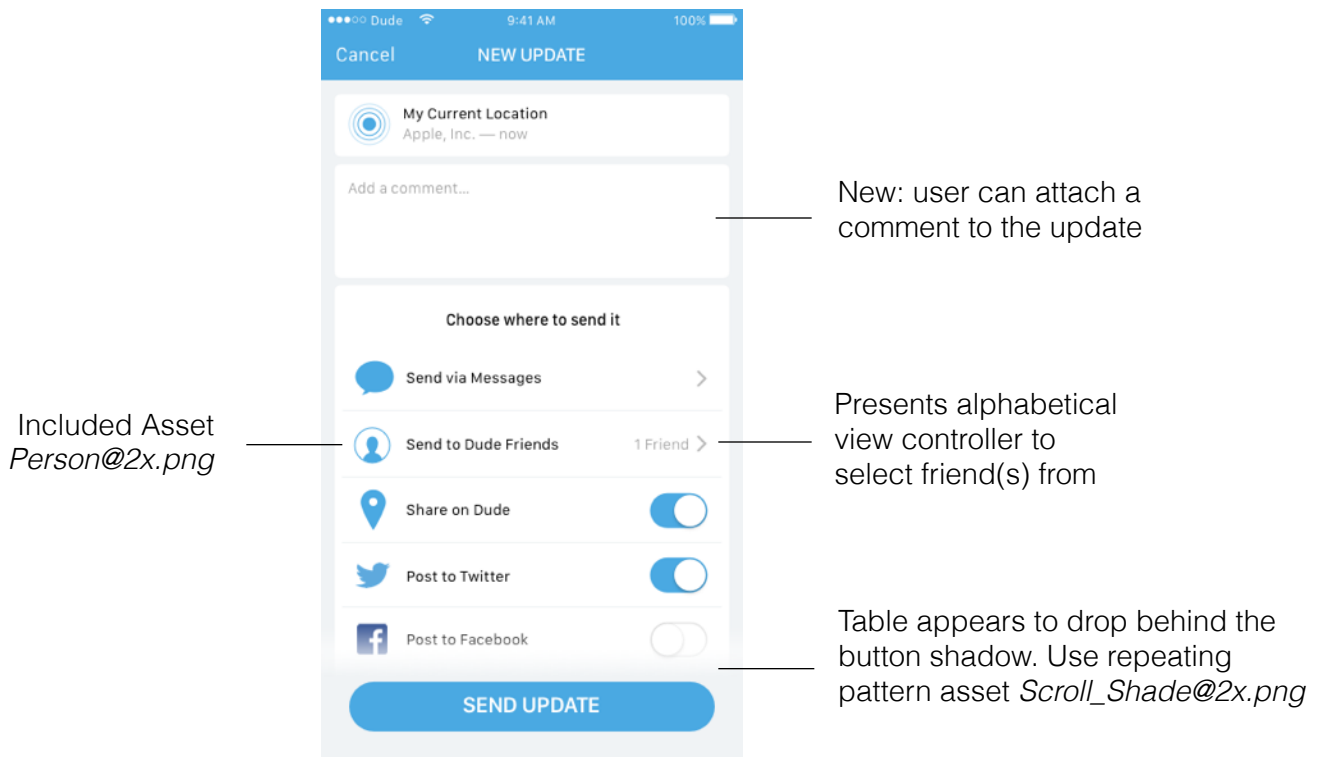

Allows user to edit their information

Shows the most recent update sent to **all friends** only

Alternate way of creating a new Update.

Composing Updates

Changes

The New Update view has been modified to include space to add a comment and update a single friend. The process of selecting and sending an update is largely unchanged.

New: user can attach a comment to the update

Presents alphabetical view controller to select friend(s) from

Table appears to drop behind the button shadow. Use repeating pattern asset *Scroll_Shade@2x.png*
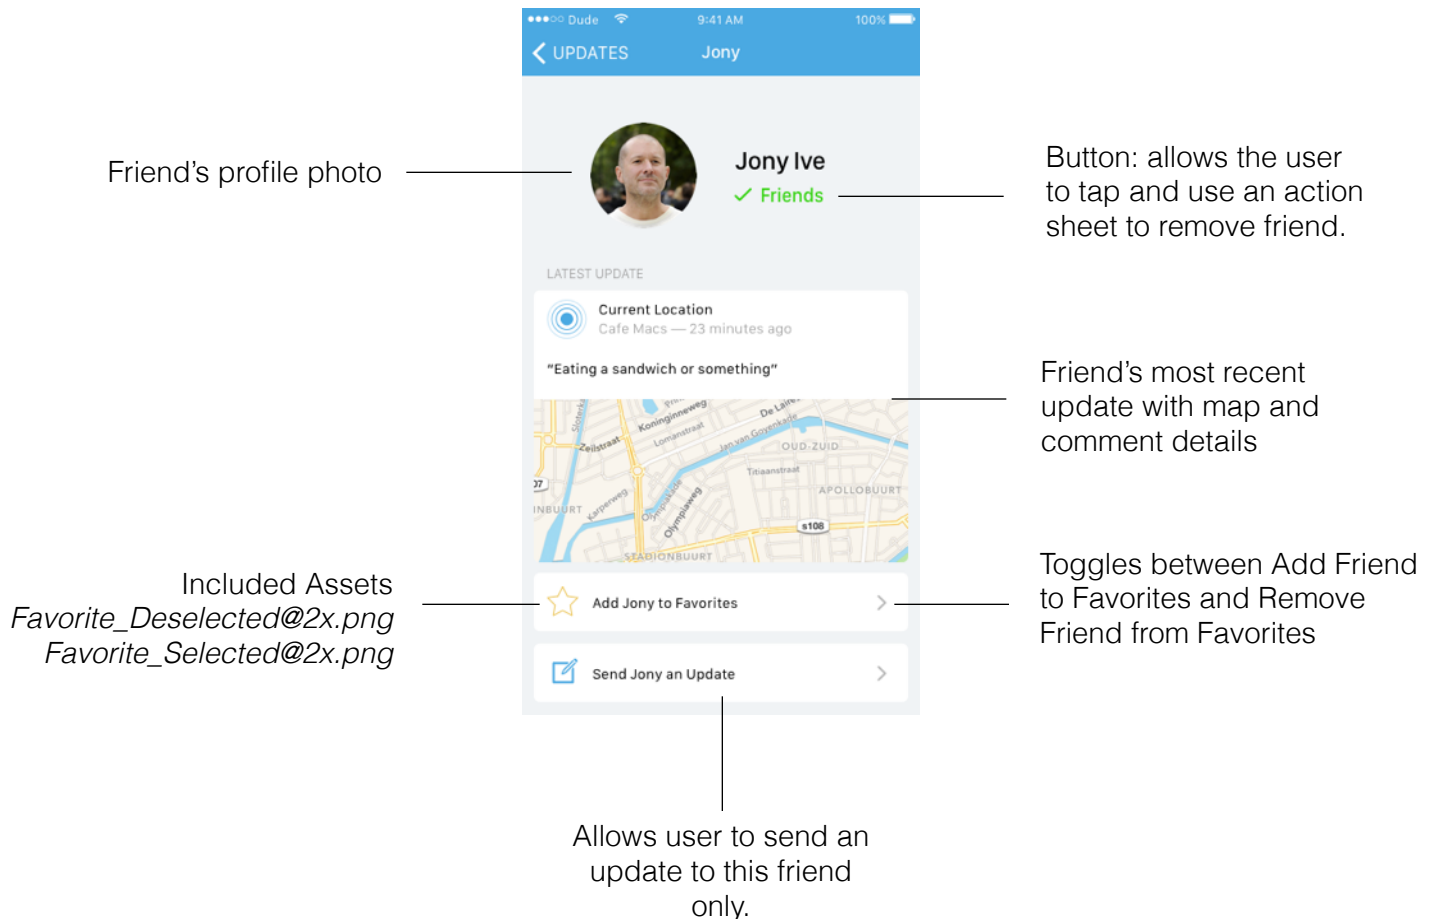

Pattern Asset

The Pattern Asset is a 1px wide image that can be infinitely stretched horizontally.

Update Details

Users can now tap on a friend's update for more information. Doing so presents a new view similar to the Me tab. This is very much like a profile for the friend, which shows detail about their last update.

Friend's profile photo

Button: allows the user to tap and use an action sheet to remove friend.

Friend's most recent update with map and comment details

Included Assets
Favorite_Deselected@2x.png
Favorite_Selected@2x.png

Toggles between Add Friend to Favorites and Remove Friend from Favorites

Allows user to send an update to this friend only.

Note: the star image and text on the favorite row change as the user is removed/added to and from Favorites. When added, the star is *Favorite_Selected@2x.png* and the text reads 'Remove Friendname from Favorites.' When the user is not a favorite, the star is *Favorite_Deselected@2x.png* and the text reads 'Add Friendname to Favorites.'
